PROJECT NAME: DemandEst - AI powered Food DemandForecaster

Team Leader

The screenshot displays a Jupyter Notebook interface with the following content:

### Reading And Merging .Csv Files

**In [104]:**

```
body = client_ebb884ca98d444a5ae59a6874ea685aa.get_object(Bucket='fooddemandforecatsing-donotdelete-pr-cdss9tfwyg4lgb',Key='meal_
# add missing __iter__ method, so pandas accepts body as file-like object
if not hasattr(body, "__iter__"): body.__iter__ = types.MethodType( __iter__, body )

meal_info = pd.read_csv(body)
```

**In [105]:** meal\_info.head()

**Out[105]:**

	meal_id	category	cuisine
0	1885	Beverages	Thai
1	1993	Beverages	Thai
2	2539	Beverages	Thai
3	1248	Beverages	Indian
4	2631	Beverages	Indian

**In [106]:**

```
body = client_ebb884ca98d444a5ae59a6874ea685aa.get_object(Bucket='fooddemandforecatsing-donotdelete-pr-cdss9tfwyg4lgb',Key='fulf:
# add missing __iter__ method, so pandas accepts body as file-like object
if not hasattr(body, "__iter__"): body.__iter__ = types.MethodType( __iter__, body )

fulfilment_center_info = pd.read_csv(body)
```

**In [107]:** fulfilment\_center\_info.head()

**Out[107]:**

	center_id	city_code	region_code	center_type	op_area
0	11	679	56	TYPE_A	3.7
1	13	590	56	TYPE_B	6.7
2	124	590	56	TYPE_C	4.0
3	66	648	34	TYPE_A	4.1
4	94	632	34	TYPE_C	3.6

Merging train.csv and meal\_info.csv dataset by using common key id:

We notice that meal\_id column in train.csv is similar to meal\_id in meal\_info.csv dataset. Let us merge these two datasets, train.csv and meal\_info.csv using common key meal\_id and name the table as trainfinal.

**In [108]:** trainfinal = pd.merge(train, meal\_info, on="meal\_id", how="outer")

Merging trainfinal.csv and fulfilment\_center\_info.csv dataset by using common key id:

We notice that center\_id column in trainfinal.csv is similar to center\_id in fulfilment\_center\_info.csv dataset. Let us merge these two datasets, trainfinal.csv and fulfilment\_center\_info.csv using common key center\_id and store it back in trainfinal. Display the first five rows of trainfinal using head().

**In [109]:** trainfinal = pd.merge(trainfinal,fulfilment\_center\_info, on="center\_id", how="outer")
